## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ruiz US Patent No. 6,302,877 in view of Youssefi et al. US Patent No. 6,814,729..

Ruiz discloses a laser ophthalmic apparatus for correcting visual defects of the eye, such as myopia, the laser apparatus comprising: a computer-control delivery system adapted to deliver a laser ablation in a region outside of an identified optical zone and separated therefrom by a minimum distance as presently claimed (see Figures 4, 4A).

Ruiz does not teach the use of the recited aperture transmission. However, Youssefi et al. teach an ophthalmic apparatus incorporation an aperture with a direct aperture transmission portion and a diffractive aperture transmission portion as claimed. Therefore, at the time of the applicant's invention, it would have been obvious to one skilled in the art to modify Riuz in view of Youssefi and use a beam-shaping aperture having a direct transmission and diffractive transmission in order to direct intensity profile of the treatment light on different portions of the treatment region.
